Research Interests

My research spans machine learning algorithms with applications in robotics. Recently, I have been most excited about multi-agent learning, mixture of experts, and model composition across different modalities. Leveraging my background in algorithms and high-performance computing, I design efficient and scalable solutions for complex problems.

Education

Massachusetts Institute of Technology — Cambridge, MA
*Bachelor of Science in **Computer Science and Engineering** (Course 6-3)* — Sep. 2022 - May. 2025
*Bachelor of Science in **Mathematics** (Course 18)* — **GPA: 5.0/5.0**
Graduate coursework: Multi Agent Learning, Sensorimotor Learning, High-Dimensional Statistics, Symmetry ML, NLP, Quantum Computation, Programming Synthesis, Secure Hardware Design

Publications

Probabilistic Homotopy Optimization for Dynamic Motion Planning — IROS 2024 (https://arxiv.org/abs/2408.12490)
Shayan Pardis, Matthew Chignoli, Sangbae Kim

Research Experience

Undergraduate Research in Video Language Planning — Cambridge, MA
MIT; Supervised by Prof. Leslie Kaelbling and Yilun Du — Sep. 2024 - Present
- Focusing on training diffusion models to generate subgoal images with dynamic granularity, enabling interactive plan refinement

Undergraduate Research in Trajectory Optimization — Cambridge, MA
MIT; Supervised by Prof. Sangbae Kim — Feb. 2023 - May 2024
- Designed an optimization method inspired by curriculum learning and Probabilistic Roadmaps (PRM), traversing the homotopy space by solving a sequence of relaxed subproblems. This approach enables efficient solutions to complex and challenging optimization tasks

Awards

Gold medal (rank 10) in International Olympiad in Informatics (2020)
Gold medal (rank 1) in Iran National Olympiad in Informatics (2019)
ICPC 2021 World Finalist (Asia-Tehran region champion)
Silver medal (rank 24) in Asia-Pacific Informatics Olympiad

Projects

Novel Shape Generation with SO3-Equivariant Auto-Encoders — Apr. 2024 - May 2024
Designed an SO(3) equivariant autoencoder using spherical harmonics and a latent space traversal that separates rotation from deformation.

Better Offline RL with S4 Models — Apr. 2024 - May 2024
Reimplemented Decision Transformer replacing transformer with S4 model and demonstrated improved performance in credit assignment tasks.

Formal Complexity Verification — Oct. 2023 - Dec. 2023
Formulated time complexity verification of a program as synthesizing a fix-point function. The demo uses a custom language with Python syntax.

FaceExplore — Jun. 2023 - Aug. 2023
Created a face search engine that uses a custom clustering method on ResNet vector embeddings (unsupervised). Implemented MTCNN for face detection and used React, Flask, Nginx, and Docker for the website.

Scripty (HackMIT 2024) — Sep. 2024 - Sep. 2024
Educational tool to track student performance on projects, providing live feedback and tips, and automating infrastructure setup for instructors. Built with Python, DSPy, Kubernetes, and React; won Warp and Orbstack challenge prizes.

Sharif AI Challenge — Mar. 2021 - May 2021
Developed (as a team) an AI agent for a distributed game that ranked 4th in the competition. Used Huffman-code for cost-efficient communication and A* algorithm for shortest path detection over a not-fully-explored map.

Work Experience

Citadel LLC — New York City, NY
Quantitative Developer Intern in Central Risk Engineering — Jun. 2024 - Aug. 2024
- Developed tools for distributed system infrastructure and secured a return offer; Kubernetes, gRPC, multiprocessing, Cloud Run, Redis

Google Summer of Code Mountain View, CA (Remote)
Julia CUDA Developer Jun. 2023 - Sep. 2023

- Developed CUDA kernels for QuantumClifford.jl, a Julia package for Quantum Error-Correcting Codes; achieved 10x speedup (details)

SIMCON Wuerselen, Germany (Remote)
Geometric Algorithm Design Intern Sep. 2021 - Mar. 2022

- Designed a 3D mesh contraction algorithm to convert meshes into skeleton graphs with substantial accuracy and speed improvement

Carriot Tehran, Iran
Data Science Intern Jul. 2021 - Sep. 2021

- Designed and trained a model to map addresses to their corresponding locations (geocoding problem) utilizing OSM and Elasticsearch

Abarkelas Tehran, Iran
Web Developer (Part-Time) Oct. 2020 - Jun. 2021

- Developed backend (Django) and frontend (NuxtJs). Set up Prometheus and Grafana for monitoring. Created PWA for the website

Teaching and Service

Natural Language and Computation (MIT 6.S051, Prof. Robert Berwick) Sep. 2022 - Dec. 2022
Revised and created new lab practices including: Segmentation, Parsers, Semantic Parsing with Lambda Calculus, and Grammar Inference.

Algorithm Course Coordinator (Iranian National Olympiad in Informatics Summer Camp) Jul. 2021 - Aug. 2021
Organized the course and delivered lectures on flow algorithms, number theory, and dynamic programming. Designed 3 out of 9 final exam problems.

Author of Olympiad Graph Theory Book Feb. 2020 - Dec. 2021
Initiated and contributed to an online book on graph theory in Persian, available at gtio.shaazzz.ir, with a focus on algorithmic approaches to graph theory concepts.
